

DigiBull Login Update

Short summary of the new SRIM login screen.

Added

- Fancy animated DigiBull login page with orbit, scan, glow, and card motion.
- Three credential modes:
 - UID + password
 - Email + password
 - Mobile number + OTP
- Two OAuth-style entries:
 - NetBird / Windows login
 - Google login
- Forgot password panel.
- New user onboarding panel.
- Compact NetBird PAT login kept at the bottom.

Works now

- UID + password works with the current local/test backend.
- NetBird PAT login keeps the existing real NetBird flow.
- Local tester login still appears in dev builds.

Needs backend wiring

- Google OAuth login.
- Production email/password auth.
- Mobile OTP send/verify.
- Forgot-password email.
- New-user onboarding request.

The UI is ready for those flows and shows clear messages until the backend endpoints are connected.
